## Description

The Hitachi HN58V256A and HN58V257A are electrically erasable and programmable ROMs organized as 32768-word × 8-bit. They have realized high speed, low power consumption and high reliability by employing advanced MNOS memory technology and CMOS process and circuitry technology. They also have a 64-byte page programming function to make their write operations faster.

## Features

- Single 3 V supply: 2.7 to 5.5 V
- Access time: 120 ns max
- Power dissipation:
  - Active: 20 mW/MHz, (typ)
  - Standby: 110 μW (max)
- On-chip latches: address, data, CE, OE, WE
- Automatic byte write: 10 ms max
- Automatic page write (64 bytes): 10 ms max
- Ready/Busy (only the HN58V257A series)
- Data polling and Toggle bit
- Data protection circuit on power on/off
- Conforms to JEDEC byte-wide standard
- Reliable CMOS with MNOS cell technology
- 10<sup>5</sup> erase/write cycles (in page mode)
- 10 years data retention
- Software data protection
- Write protection by RES pin (only the HN58V257A series)
- Industrial versions (Temperature range: – 20 to 85°C and – 40 to 85°C) are also available.

# HN58V256A Series, HN58V257A Series

## Absolute Maximum Ratings

Parameter	Symbol	Value	Unit
Supply voltage relative to $V_{SS}$	$V_{CC}$	-0.6 to +7.0	V
Input voltage relative to $V_{SS}$	$V_{in}$	-0.5 <sup>*1</sup> to +7.0 <sup>*3</sup>	V
Operating temperature range <sup>*2</sup>	$T_{opr}$	0 to +70	°C
Storage temperature range	$T_{stg}$	-55 to +125	°C

Notes: 1.  $V_{in\ min} = -3.0\ V$  for pulse width  $\leq 50\ ns$

2. Including electrical characteristics and data retention

3. Should not exceed  $V_{CC} + 1.0\ V$ .

## Recommended DC Operating Conditions

Parameter	Symbol	Min	Typ	Max	Unit
Supply voltage	$V_{CC}$	2.7	3.0	5.5	V
	$V_{SS}$	0	0	0	V

Notes: 1.  $t_{DF}$  and  $t_{DFR}$  are defined as the time at which the outputs achieve the open circuit conditions and are no longer driven.

2. This function is supported by only the HN58V257A series.

3. Use this device in longer cycle than this value.

4.  $t_{WC}$  must be longer than this value unless polling techniques or  $\overline{RDY}/\overline{Busy}$  (only the HN58V257A series) are used. This device automatically completes the internal write operation within this value.

5. Next read or write operation can be initiated after  $t_{DW}$  if polling techniques or  $\overline{RDY}/\overline{Busy}$  (only the HN58V257A series) are used.

6. This parameter is sampled and not 100% tested.

7. A6 through A14 are page addresses and these addresses are latched at the first falling edge of  $\overline{WE}$ .

8. A6 through A14 are page addresses and these addresses are latched at the first falling edge of  $\overline{CE}$ .

## Toggle bit

This device provides another function to determine the internal programming cycle. If the EEPROM is set to read mode during the internal programming cycle, I/O6 will charge from “1” to “0” (toggling) for each read. When the internal programming cycle is finished, toggling of I/O6 will stop and the device can be accessible for next read or program.

## Toggle bit Waveform

- Notes:
1. I/O6 beginning state is “1”.
  2. I/O6 ending state will vary.
  3. See AC read characteristics.
  4. Any address location can be used, but the address must be fixed.

## Functional Description

### Automatic Page Write

Page-mode write feature allows 1 to 64 bytes of data to be written into the EEPROM in a single write cycle. Following the initial byte cycle, an additional 1 to 63 bytes can be written in the same manner. Each additional byte load cycle must be started within 30  $\mu$ s from the preceding falling edge of  $\overline{WE}$  or  $\overline{CE}$ . When  $\overline{CE}$  or  $\overline{WE}$  is high for 100  $\mu$ s after data input, the EEPROM enters write mode automatically and the input data are written into the EEPROM.

### Data Polling

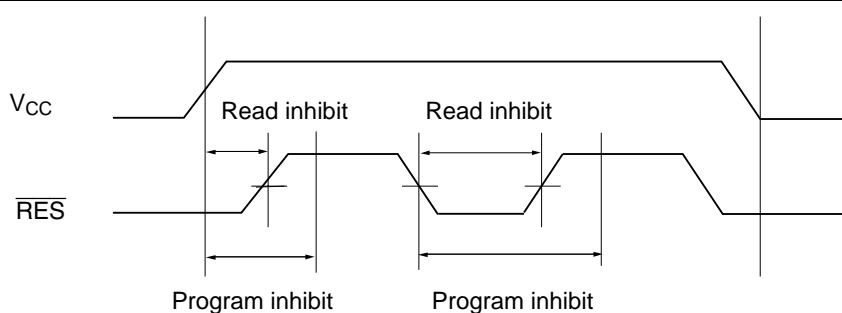

$\overline{Data}$  polling indicates the status that the EEPROM is in a write cycle or not. If EEPROM is set to read mode during a write cycle, an inversion of the last byte of data outputs from I/O7 to indicate that the EEPROM is performing a write operation.

### $\overline{RDY/Busy}$ Signal (only the HN58V257A series)

$\overline{RDY/Busy}$  signal also allows the status of the EEPROM to be determined. The  $\overline{RDY/Busy}$  signal has high impedance except in write cycle and is lowered to  $V_{OL}$  after the first write signal. At the end of a write cycle, the  $\overline{RDY/Busy}$  signal changes state to high impedance.

### $\overline{RES}$ Signal (only the HN58V257A series)

When  $\overline{RES}$  is low, the EEPROM cannot be read or programmed. Therefore, data can be protected by keeping  $\overline{RES}$  low when  $V_{CC}$  is switched.  $\overline{RES}$  should be high during read and programming because it doesn't provide a latch function.

## $\overline{WE}$ , $\overline{CE}$ Pin Operation

During a write cycle, addresses are latched by the falling edge of  $\overline{WE}$  or  $\overline{CE}$ , and data is latched by the rising edge of  $\overline{WE}$  or  $\overline{CE}$ .

## Write/Erase Endurance and Data Retention Time

The endurance is  $10^5$  cycles in case of the page programming and  $10^4$  cycles in case of the byte programming (1% cumulative failure rate). The data retention time is more than 10 years when a device is page-programmed less than  $10^4$  cycles.

## Data Protection

### 1. Data Protection against Noise on Control Pins ( $\overline{CE}$ , $\overline{OE}$ , $\overline{WE}$ ) during Operation

During readout or standby, noise on the control pins may act as a trigger and turn the EEPROM to programming mode by mistake.

To prevent this phenomenon, this device has a noise cancellation function that cuts noise if its width is 20 ns or less.

Be careful not to allow noise of a width of more than 20 ns on the control pins.

## 2. Data Protection at $V_{CC}$ On/Off

When  $V_{CC}$  is turned on or off, noise on the control pins generated by external circuits (CPU, etc) may act as a trigger and turn the EEPROM to program mode by mistake. To prevent this unintentional programming, the EEPROM must be kept in an unprogrammable state while the CPU is in an unstable state.

Note: The EPROM should be kept in unprogrammable state during  $V_{CC}$  on/off by using CPU RESET signal.

### (1) Protection by $\overline{CE}$ , $\overline{OE}$ , $\overline{WE}$

To realize the unprogrammable state, the input level of control pins must be held as shown in the table below.

$\overline{CE}$	$V_{CC}$	×	×
$\overline{OE}$	×	$V_{SS}$	×
$\overline{WE}$	×	×	$V_{CC}$

×: Don't care.

$V_{CC}$ : Pull-up to  $V_{CC}$  level.

$V_{SS}$ : Pull-down to  $V_{SS}$  level.

## (2) Protection by $\overline{\text{RES}}$ (only the HN58V257A series)

The unprogrammable state can be realized by that the CPU's reset signal inputs directly to the EEPROM's  $\overline{\text{RES}}$  pin.  $\overline{\text{RES}}$  should be kept  $V_{SS}$  level during  $V_{CC}$  on/off.

The EEPROM breaks off programming operation when  $\overline{\text{RES}}$  becomes low, programming operation doesn't finish correctly in case that  $\overline{\text{RES}}$  falls low during programming operation.  $\overline{\text{RES}}$  should be kept high for 10 ms after the last data input.

## HN58V256A Series, HN58V257A Series

### 3. Software data protection

To prevent unintentional programming, this device has the software data protection (SDP) mode. The SDP is enabled by inputting the following 3 bytes code and write data. SDP is not enabled if only the 3 bytes code is input. To program data in the SDP enable mode, 3 bytes code must be input before write data.

Address	Data
5555	AA
↓	↓
2AAA	55
↓	↓
5555	A0
↓	↓
Write address	Write data } Normal data input

The SDP mode is disabled by inputting the following 6 bytes code. Note that, if data is input in the SDP disable cycle, data can not be written.

Address	Data
5555	AA
↓	↓
2AAA	55
↓	↓
5555	80
↓	↓
5555	AA
↓	↓
2AAA	55
↓	↓
5555	20

The software data protection is not enabled at the shipment.

Note: There are some differences between Hitachi's and other company's for enable/disable sequence of software data protection. If there are any questions, please contact with Hitachi sales offices.
