

245 MHz Clock Generator and Integrated Buffer for PowerPC™

General Description

The **ICS9178-03** generates all clocks required for high speed PowerPC RISC microprocessor systems. Generating clocks in phase with an external reference frequency allows the **ICS9178-03** to be used as a multiplying zero delay buffer. Three different multiplying factors are externally selectable. These factors can be customized for specific applications. An external frequency can be directly applied to aid system testing. With 2X processor clock speeds up to 245 MHz, PECL outputs are provided. User selectable frequency ratios are available for PCLK/BCLK and PCLK/XCLK. Each pair of clocks outputs have separate supply pins to minimize output jitter and allow them to operate at 5V, 3.3V or custom voltage levels.

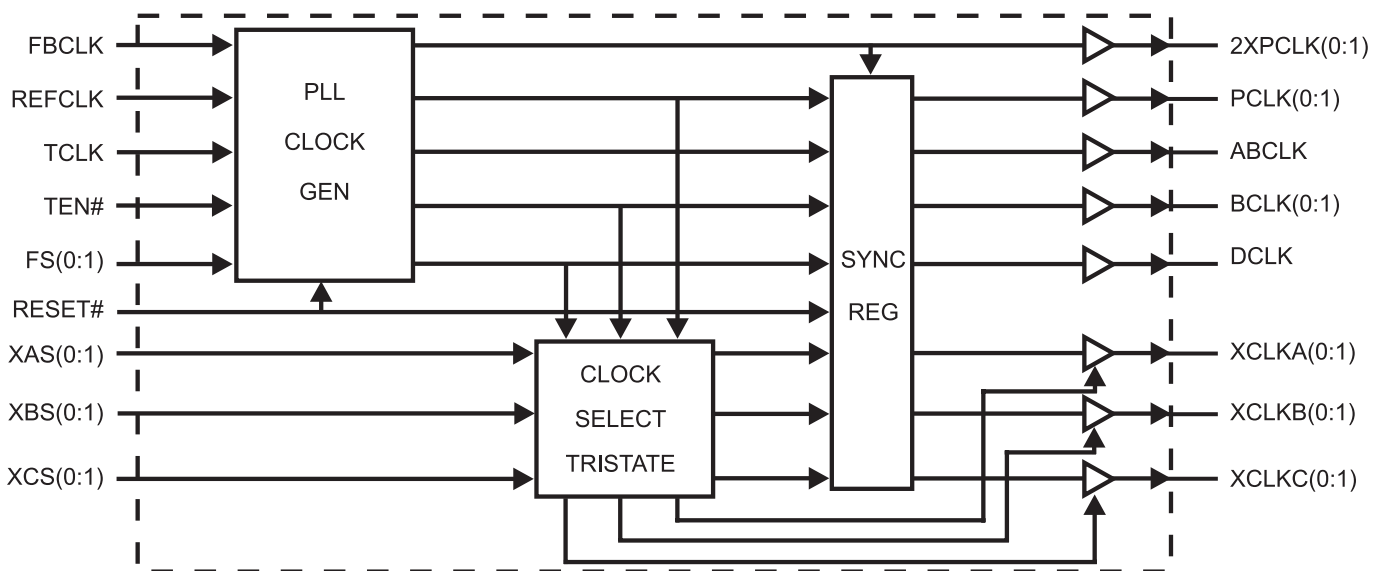

Features

- Generates 2 PECL 2x processor, 2 TTL/CMOS 1x processor and 10 selectable bus clocks
- 2XPCLK ranges from 75 MHz to 245 MHz (5V or 5V/3.3V mixed supply) or 60 to 170 MHz (3.3V only)
- Asymmetric duty cycle bus clock for PowerPC
- Bus to processor clock skews less than ± 250 ps
- 2XPCLK to PCLK skew controlled at 300 ± 300 ps
- Selectable reference multiplying factors
- Selectable PCLK/BCLK and PCLK/XCLK ratios
- Separate supplies allow 5V and 3.3V output mix
- 3.0V - 5.5V supply range
- 44-pin PQFP package

Applications

- Ideal for high-speed systems based on PowerPC

Block Diagram

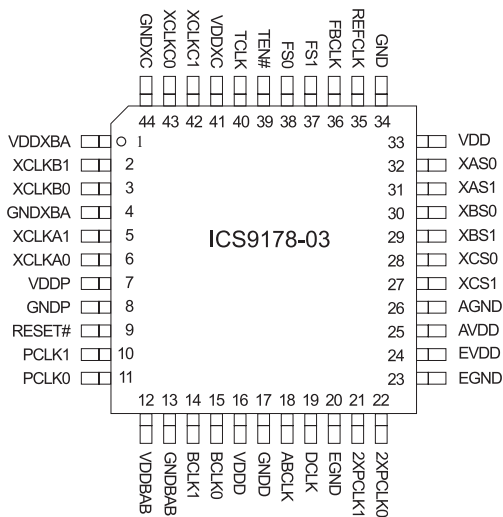

PowerPC is a trademark of Motorola Corporation.

1	0	1	1	TCLK	TCLK	TCLK/2	TCLK/12 (66/33)	TCLK/12	TCLK/4
1	1	1	1	TCLK	TCLK	TCLK/2	TCLK/2	TCLK/2	TCLK/4

*VCO range is limited from 75- 245 MHz at 5V±5% and 60 - 170 MHz at 3.3V±5%. Divide ratios assume BCLK is externally fed back to FBCLK.

The 2XPCLK series or Thevenin trace terminations must be optimized for the specific operating frequency and board layout. The rising edge of ABCLK is coincident with the rising edges of 2XPCLK, PCLK and other BCLKs.

Pin Description

PIN NUMBER	PIN NAME	TYPE	DESCRIPTION
32	XAS0	Input	LSB Programmable Group A frequency selector.
31	XAS1	Input	MSB Programmable Group A frequency selector.
6	XCLKA0	Output	TTL/CMOS group A programmable clock output.
5	XCLKA1	Output	TTL/CMOS group A programmable clock output.
30	XBS0	Input	LSB Programmable Group B frequency selector.
29	XBS1	Input	MSB Programmable Group B frequency selector.
3	XCLKB0	Output	TTL/CMOS Group B programmable clock output.
2	XCLKB1	Output	TTL/CMOS Group B programmable clock output.
1	VDDXBA	—	Power for programmable Group A and B buffers (Pins 2, 3, 5, 6).
4	GNDXBA	—	Ground for programmable Group A and B buffers (Pins 2, 3, 5, 6).
44	GNDXC	—	Ground for the programmable Group C buffers (Pins 42 and 43).
43	XCLKC0	Output	TTL/CMOS Group C programmable clock output.
42	XCLKC1	Output	TTL/CMOS Group C programmable clock output.
41	VDDXC	—	Power for the XC signal output buffers (Pins 42 and 43).
28	XCS0	Input	LSB Programmable Group C frequency selector.
27	XCS1	Input	MSB Programmable Group C frequency selector.
11	PCLK0	Output	TTL/CMOS 1X Processor clock output.
10	PCLK1	Output	TTL/CMOS 1X Processor clock output.
8	GNDP	—	Ground for PCLK output buffers (Pins 11 and 10).
7	VDDP	—	Power for PCLK output buffers (Pins 11 and 10).
22	2XPCLK0	Output	PECL 2X Processor clock output.
21	2XPCLK1	Output	PECL 2X Processor clock output.
24	EVDD	—	Power for PECL buffers (Pins 21 and 22).
23	EGND	—	Ground for PECL buffers (Pins 21 and 22).
20	EGND	—	Ground for PECL buffers (Pins 21 and 22).
38*	FS0	Input	LSB frequency select PLL (divider mode control).
37*	FS1	Input	MSB frequency select PLL (divider mode control).
36	FBCLK	Input	External PLL feedback path from one of the BCLK outputs.
35	REFCLK	Input	External reference clock input.
25	AVDD	—	Power for the analog PLL circuitry.
26	AGND	—	Ground for the analog PLL circuitry.
19	DCLK	Output	TTL/CMOS D clock output.
16	VDDD	—	Power for D output buffers (Pin 19).
17	GNDD	—	Ground for D output buffer (Pin 19).
15	BCLK0	Output	TTL/CMOS B (Bus) clock output.
14	BCLK1	Output	TTL/CMOS B (Bus) clock output.
13	GNDBAB	—	Ground for output buffers AB and B clocks (Pins 14, 15 & 18).
12	VddbAB	—	Power for output buffers AB and B clocks (Pins 14, 15 & 18).
18	ABCLK	Output	TTL/CMOS AB Bus clock (has Asymmetric duty cycle).
40	TCLK	Input	External test clock input.
39	TEN#	Input	Test enable (tie low).
9	RESET#	Input	Sync register reset (active low).
33	VDD	—	Digital power supply for 5.0 or 3.3V.
34	GND	—	Digital ground supply.

*=Pin is pulled-up to VDD internally by the device.

ICS9178-03

Absolute Maximum Ratings

- VDD referenced to GND 7V
- Operating temperature under bias..... 0°C to +70°C
- Storage temperature -65°C to +150°C
- Voltage on I/O pins referenced to GND..... GND -0.5V to VDD +0.5V
- Power dissipation 0.5 Watts

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Electrical Characteristics

Device Specifications

Maximum Ratings				
DESCRIPTION	SYMBOL	MIN	MAX	UNITS
Supply voltage relative to GND	VDD	-0.5	7.0	V
Input voltage with respect to GND	VIN	-0.5	VDD +0.5	V
