**1048576-BIT(131072-WORD BY 8-BIT)CMOS STATIC RAM**

**DESCRIPTION**

The M5M51008CP,FP,VP,RV,KV,KR are a 1048576-bit CMOS static RAM organized as 131072 word by 8-bit which are fabricated using high-performance quadruple-polysilicon and double metal CMOS technology. The use of thin film transistor (TFT) load cells and CMOS periphery result in a high density and low power static RAM.

They are low standby current and low operation current and ideal for the battery back-up application.

The M5M51008CVP,RV,KV,KR are packaged in a 32-pin thin small outline package which is a high reliability and high density surface mount device(SMD). Two types of devices are available. M5M51008CVP,KV(normal lead bend type package), M5M51008CRV,KR(reverse lead bend type package).Using both types of devices, it becomes very easy to design a printed circuit board.

**FEATURES**

Type name	Access time (max)	Power supply current	
		Active (1MHz) (max)	stand-by (max)
M5M51008CP,FP,VP,RV,KV,KR-55HI	55ns	15mA (1MHz)	40µA (V <sub>cc</sub> =5.5V)
M5M51008CP,FP,VP,RV,KV,KR-70HI	70ns		16µA (V <sub>cc</sub> =5.5V) 0.1µA (V <sub>cc</sub> =3.0V typ)
M5M51008CP,FP,VP,RV,KV,KR-55XI	55ns		
M5M51008CP,FP,VP,RV,KV,KR-70XI	70ns		

- Low stand-by current 0.1µA (typ.)
- Directly TTL compatible : All inputs and outputs
- Easy memory expansion and power down by  $\bar{S}_1, S_2$
- Data hold on +2V power supply
- Three-state outputs : OR - tie capability
- $\bar{O}E$  prevents data contention in the I/O bus
- Common data I/O
- Package
  - M5M51008CP ..... 32pin 600mil DIP
  - M5M51008CFP ..... 32pin 525mil SOP
  - M5M51008CVP,RV ..... 32pin 8 X 20 mm<sup>2</sup> TSOP
  - M5M51008CKV,KR ..... 32pin 8 X 13.4 mm<sup>2</sup> TSOP

**APPLICATION**

Small capacity memory units

**PIN CONFIGURATION (TOP VIEW)**

**FUNCTION**

The operation mode of the M5M51008C series are determined by a combination of the device control inputs  $\bar{S}_1, S_2, \bar{W}$  and  $\bar{OE}$ . Each mode is summarized in the function table.

A write cycle is executed whenever the low level  $\bar{W}$  overlaps with the low level  $\bar{S}_1$  and the high level  $S_2$ . The address must be set up before the write cycle and must be stable during the entire cycle. The data is latched into a cell on the trailing edge of  $\bar{W}, \bar{S}_1$  or  $S_2$ , whichever occurs first, requiring the set-up and hold time relative to these edge to be maintained. The output enable input  $\bar{OE}$  directly controls the output stage. Setting the  $\bar{OE}$  at a high level, the output stage is in a high-impedance state, and the data bus contention problem in the write cycle is eliminated.

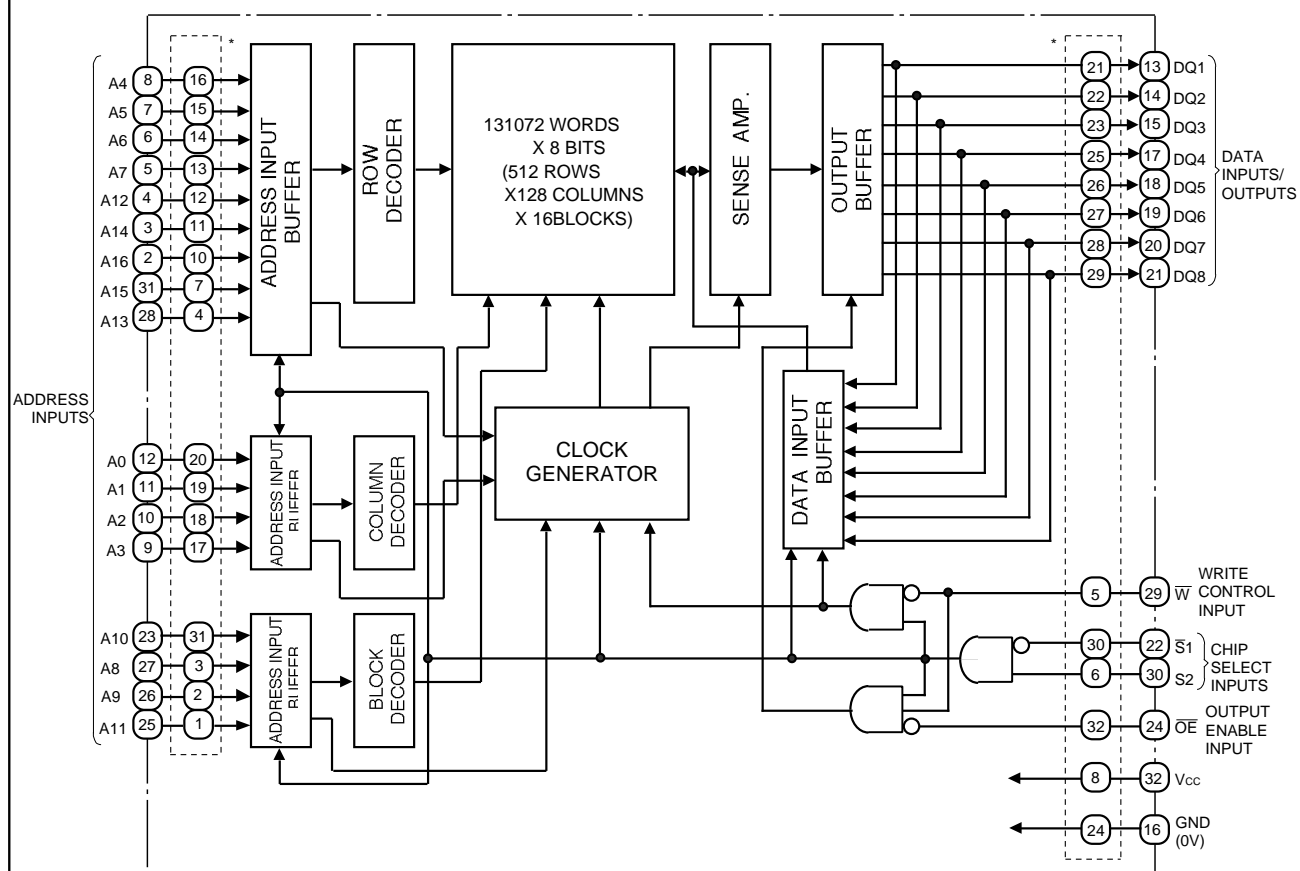

A read cycle is executed by setting  $\bar{W}$  at a high level and  $\bar{OE}$  at a low level while  $\bar{S}_1$  and  $S_2$  are in an active state ( $\bar{S}_1=L, S_2=H$ ).

When setting  $\bar{S}_1$  at a high level or  $S_2$  at a low level, the chip are in a non-selectable mode in which both reading and writing are disabled. In this mode, the output stage is in a high-impedance state, allowing OR-tie with other chips and memory expansion by  $\bar{S}_1$  and  $S_2$ . The power supply current is reduced as low as the stand-by current which is specified as  $I_{CC3}$  or  $I_{CC4}$ , and the memory data can be held at +2V power supply, enabling battery back-up operation during power failure or power-down operation in the non-selected mode.

**FUNCTION TABLE**

$\bar{S}_1$	$S_2$	$\bar{W}$	$\bar{OE}$	Mode	DQ	I <sub>cc</sub>
X	L	X	X	Non selection	High-impedance	Stand-by
H	X	X	X	Non selection	High-impedance	Stand-by
L	H	L	X	Write	Din	Active
L	H	H	L	Read	Dout	Active
L	H	H	H		High-impedance	Active

**(4) TIMING DIAGRAMS**

**Read cycle**

**Write cycle ( $\overline{W}$  control mode)**

**Write cycle ( $\bar{S}_1$  control mode)**

**Write cycle ( $S_2$  control mode)**

- Note 3: Hatching indicates the state is "don't care".  
 4: Writing is executed while  $S_2$  high overlaps  $\bar{S}_1$  and  $\bar{W}$  low.  
 5: When the falling edge of  $\bar{W}$  is simultaneously or prior to the falling edge of  $\bar{S}_1$  or rising edge of  $S_2$ , the outputs are maintained in the high impedance state.  
 6: Don't apply inverted phase signal externally when DQ pin is output mode.
