## 74HC/HCT4052 Dual 4-channel analog multiplexer/demultiplexer

File under Integrated Circuits, IC06

## Dual 4-channel analog multiplexer/demultiplexer

## 74HC/HCT4052

## FEATURES

- Wide analog input voltage range: $\pm 5 \mathrm{~V}$.
- Low "ON" resistance:
$80 \Omega$ (typ.) at $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}=4.5 \mathrm{~V}$
$70 \Omega$ (typ.) at $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}=6.0 \mathrm{~V}$
$60 \Omega$ (typ.) at $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}=9.0 \mathrm{~V}$
- Logic level translation: to enable 5 V logic to communicate with $\pm 5 \mathrm{~V}$ analog signals
- Typical "break before make" built in
- Output capability: non-standard
- ICC category: MSI

## GENERAL DESCRIPTION

The $74 \mathrm{HC} / \mathrm{HCT} 4052$ are high-speed Si-gate CMOS devices and are pin compatible with the "4052" of the "4000B" series. They are specified in compliance with JEDEC standard no. 7A.

The $74 \mathrm{HC} / \mathrm{HCT} 4052$ are dual 4-channel analog multiplexers/demultiplexers with common select logic. Each multiplexer has four independent inputs/outputs ( $\mathrm{n} \mathrm{Y}_{0}$ to $n Y_{3}$ ) and a common input/output ( $n Z$ ). The common channel select logics include two digital select inputs ( $\mathrm{S}_{0}$ and $S_{1}$ ) and an active LOW enable input ( $\bar{E}$ ).

With $\bar{E}$ LOW, one of the four switches is selected (low impedance ON -state) by $\mathrm{S}_{0}$ and $\mathrm{S}_{1}$. With $\overline{\mathrm{E}} \mathrm{HIGH}$, all switches are in the high impedance OFF-state, independent of $S_{0}$ and $S_{1}$.
$\mathrm{V}_{\mathrm{CC}}$ and GND are the supply voltage pins for the digital control inputs ( $\mathrm{S}_{0}$ and $\mathrm{S}_{1}$, and $\overline{\mathrm{E}}$ ). The $\mathrm{V}_{\mathrm{CC}}$ to GND ranges are 2.0 to 10.0 V for HC and 4.5 to 5.5 V for HCT. The analog inputs/outputs ( $n Y_{0}$ to $n Y_{3}$, and $n Z$ ) can swing between $\mathrm{V}_{\mathrm{CC}}$ as a positive limit and $\mathrm{V}_{\mathrm{EE}}$ as a negative limit. $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}$ may not exceed 10.0 V .

For operation as a digital multiplexer/demultiplexer, $\mathrm{V}_{\mathrm{EE}}$ is connected to GND (typically ground).

## QUICK REFERENCE DATA

$\mathrm{V}_{\mathrm{EE}}=\mathrm{GND}=0 \mathrm{~V} ; \mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C} ; \mathrm{t}_{\mathrm{r}}=\mathrm{t}_{\mathrm{f}}=6 \mathrm{~ns}$

| SYMBOL | PARAMETER | CONDITIONS | TYPICAL |  | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | HC | HCT |  |
| $\mathrm{t}_{\text {PZH }} / \mathrm{t}_{\text {PZL }}$ | turn "ON" time $\overline{\mathrm{E}}$ or $\mathrm{S}_{\mathrm{n}}$ to $\mathrm{V}_{\mathrm{OS}}$ | $\begin{aligned} & \mathrm{C}_{\mathrm{L}}=15 \mathrm{pF} ; \mathrm{R}_{\mathrm{L}}=1 \mathrm{k} \Omega ; \\ & \mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V} \end{aligned}$ | 28 | 18 | ns |
| $\mathrm{t}_{\text {PHZ }} / \mathrm{t}_{\text {PLZ }}$ | turn "OFF" time $\overline{\mathrm{E}}$ or $\mathrm{S}_{\mathrm{n}}$ to $\mathrm{V}_{\text {OS }}$ |  | 21 | 13 | ns |
| $\mathrm{C}_{1}$ | input capacitance |  | 3.5 | 3.5 | pF |
| $\mathrm{C}_{\text {PD }}$ | power dissipation capacitance per switch | notes 1 and 2 | 57 | 57 | pF |
| $\mathrm{C}_{\text {S }}$ | max. switch capacitance independent ( Y ) common (Z) |  | $\begin{aligned} & 5 \\ & 12 \end{aligned}$ | $\begin{aligned} & 5 \\ & 12 \end{aligned}$ | $\begin{aligned} & \mathrm{pF} \\ & \mathrm{pF} \end{aligned}$ |

## Notes

1. $C_{P D}$ is used to determine the dynamic power dissipation $\left(P_{D}\right.$ in $\left.\mu W\right)$ :
$\left.P_{D}=C_{P D} \times V_{C C}{ }^{2} \times f_{i}+\sum\left\{\left(C_{L}+C_{S}\right) \times V_{C C}{ }^{2} \times f_{o}\right)\right\}$ where:
$\mathrm{f}_{\mathrm{i}}=$ input frequency in MHz
$\mathrm{f}_{\mathrm{o}}=$ output frequency in MHz
$\left.\sum\left\{\left(\mathrm{C}_{\mathrm{L}}+\mathrm{C}_{S}\right) \times \mathrm{V}_{C C}{ }^{2} \times \mathrm{f}_{\mathrm{o}}\right)\right\}=$ sum of outputs
$\mathrm{C}_{\mathrm{L}}=$ output load capacitance in pF
$\mathrm{C}_{\mathrm{S}}=$ max. switch capacitance in pF
$\mathrm{V}_{\mathrm{CC}}=$ supply voltage in V
2. For HC the condition is $\mathrm{V}_{\mathrm{I}}=\mathrm{GND}$ to $\mathrm{V}_{\mathrm{CC}}$

For HCT the condition is $\mathrm{V}_{\mathrm{I}}=\mathrm{GND}$ to $\mathrm{V}_{\mathrm{CC}}-1.5 \mathrm{~V}$

## RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)
Voltages are referenced to $\mathrm{V}_{\mathrm{EE}}=\mathrm{GND}$ (ground $=0 \mathrm{~V}$ )

| SYMBOL | PARAMETER | MIN. | MAX. | UNIT | CONDITIONS |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{CC}}$ | DC supply voltage | -0.5 | +11.0 | V |  |
| $\pm \mathrm{I}_{\text {IK }}$ | DC digital input diode current |  | 20 | mA | for $\mathrm{V}_{1}<-0.5 \mathrm{~V}$ or $\mathrm{V}_{1}>\mathrm{V}_{\mathrm{CC}}+0.5 \mathrm{~V}$ |
| $\pm \mathrm{l}_{\text {SK }}$ | DC switch diode current |  | 20 | mA | for $\mathrm{V}_{\mathrm{S}}<-0.5 \mathrm{~V}$ or $\mathrm{V}_{\mathrm{S}}>\mathrm{V}_{\mathrm{CC}}+0.5 \mathrm{~V}$ |
| $\pm \mathrm{l}_{\text {S }}$ | DC switch current |  | 25 | mA | for $-0.5 \mathrm{~V}<\mathrm{V}_{\mathrm{S}}<\mathrm{V}_{\mathrm{CC}}+0.5 \mathrm{~V}$ |
| $\pm \mathrm{I}_{\text {EE }}$ | DC V $\mathrm{EEE}^{\text {current }}$ |  | 20 | mA |  |
| $\pm \mathrm{I}_{\text {CC }} ; \pm_{\text {GND }}$ | DC V ${ }_{\text {CC }}$ or GND current |  | 50 | mA |  |
| $\mathrm{T}_{\text {stg }}$ | storage temperature range | -65 | +150 | ${ }^{\circ} \mathrm{C}$ |  |
| $\mathrm{P}_{\text {tot }}$ | power dissipation per package plastic DIL |  | 750 | mW | for temperature range: -40 to $+125^{\circ} \mathrm{C}$ $74 \mathrm{HC} / \mathrm{HCT}$ <br> above $+70^{\circ} \mathrm{C}$ : derate linearly with $12 \mathrm{~mW} / \mathrm{K}$ |
|  | plastic mini-pack (SO) |  | 500 | mW | above $+70^{\circ} \mathrm{C}$ : derate linearly with $8 \mathrm{~mW} / \mathrm{K}$ |
| $\mathrm{P}_{S}$ | power dissipation per switch |  | 100 | mW |  |

## Note to ratings

1. To avoid drawing $V_{c c}$ current out of terminals $n Z$, when switch current flows in terminals $n Y_{n}$, the voltage drop across the bidirectional switch must not exceed 0.4 V . If the switch current flows into terminals $n Z$, no $\mathrm{V}_{\mathrm{cc}}$ current will flow out of terminals $n Y_{n}$. In this case there is no limit for the voltage drop across the switch, but the voltages at $n Y_{n}$ and $n Z$ may not exceed $\mathrm{V}_{\mathrm{CC}}$ or $\mathrm{V}_{\mathrm{EE}}$.

## RECOMMENDED OPERATING CONDITIONS

| SYMBOL | PARAMETER | 74HC |  |  | 74HCT |  |  | UNIT | CONDITIONS |

## Notes to the characteristics

1. At supply voltages $\left(\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}\right)$ approaching 2.0 V the Analog switch ON -resistance becomes extremely non-linear. There it is recommended that these devices be used to transmit digital signals only, when using these supply voltages
2. For test circuit measuring Ron see Fig. 8

## Notes to AC characteristics

1. Adjust input voltage $\mathrm{V}_{\text {is }}$ to 0 dBm level $(0 \mathrm{dBm}=1 \mathrm{~mW}$ into $600 \Omega)$.
2. Adjust input voltage $\mathrm{V}_{\text {is }}$ to 0 dBm level at $\mathrm{V}_{\mathrm{OS}}$ for $1 \mathrm{MHz}(0 \mathrm{dBm}=1 \mathrm{~mW}$ into $50 \Omega)$.

## General notes

$\mathrm{V}_{\text {is }}$ is the input voltage at an $n \mathrm{Y}_{\mathrm{n}}$ or nZ terminal, whichever is assigned as an input
$\mathrm{V}_{\text {os }}$ is the output voltage at an $n Y_{n}$ or $n Z$ terminal, whichever is assigned as an output

Dual 4-channel analog multiplexer/demultiplexer

## 74HC/HCT4052

Test conditions:
$\mathrm{V}_{\mathrm{CC}}=4.5 \mathrm{~V} ; \mathrm{GND}=0 \mathrm{~V} ; \mathrm{V}_{\mathrm{EE}}=-4.5 \mathrm{~V}$;
$R_{L}=50 \Omega ; R_{\text {source }}=1 \mathrm{k} \Omega$.

Fig. 12 Typical switch "OFF" signal feed-through as a function of frequency.

Test conditions:
$\mathrm{V}_{\mathrm{CC}}=4.5 \mathrm{~V}$; $\mathrm{GND}=0 \mathrm{~V} ; \mathrm{V}_{\mathrm{EE}}=-4.5 \mathrm{~V}$;
$\mathrm{R}_{\mathrm{L}}=50 \Omega ; \mathrm{R}_{\text {source }}=1 \mathrm{k} \Omega$.
