## DESCRIPTION

The 74LV257 is a low-voltage Si-gate CMOS device and is pin and function compatible with $74 \mathrm{HC} / \mathrm{HCT} 257$.

The 74LV257 is a quad 2-input multiplexer with 3 -state outputs, which select 4 bits of data from two sources and are controlled by a common data select input ( S ). The data inputs from source 0 ( $1 \mathrm{l}_{\mathrm{o}}$ to $4 \mathrm{I}_{\mathrm{o}}$ ) are selected when input $S$ is LOW and the data inputs from source 1 ( $11_{1}$ to $4 l_{1}$ ) are selected when S in HIGH. Data appears at the outputs ( 1 Y to 4 Y ) in true (non-inverting) from the selected inputs. The 74LV257 is the logic implementation of a 4-pole, 2-position switch, where the position of the switch is determined by the logic levels applied to $S$. The outputs are forced to a high impedance OFF-state when OE is HIGH.

The logic equations for the outputs are:
$1 \mathrm{Y}=\overline{\mathrm{OE}} \times\left(1 I_{1} \times \mathrm{S}+1 \mathrm{I}_{0} \times \overline{\mathrm{S}}\right)$
$2 \mathrm{Y}=\overline{\mathrm{OE}} \times\left(2 \mathrm{l}_{1} \times \mathrm{S}+2 \mathrm{l}_{0} \times \overline{\mathrm{S}}\right)$
$3 Y=\overline{O E} \times\left(31_{1} \times S+31_{0} \times \bar{S}\right)$
$4 Y=\overline{O E} \times\left(\left.4\right|_{1} \times S+4 I_{0} \times \bar{S}\right)$

$\mathrm{f}_{\mathrm{i}}=$ input frequency in MHz ; $\mathrm{C}_{\mathrm{L}}=$ output load capacitance in pF ;
$\mathrm{f}_{\mathrm{O}}=$ output frequency in MHz; $\mathrm{V}_{\mathrm{CC}}=$ supply voltage in V ;
$\sum\left(C_{L} \times V_{C C}{ }^{2} \times f_{0}\right)=$ sum of the outputs.

## NOTES:

1. Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
