

# LA1780M

## Single-Chip Tuner IC for Car Radios

### Overview

The LA1780M integrates all six blocks required in a car radio tuner on a single chip. The LA1780M is based on the LA1888NM, and features improvements to each of the blocks; improvements designed to provide improved noise characteristics, especially for noise related to multipath, three-signal intermodulation distortion, and two-signal suppression.

### Functions

- FM front end
- FM IF
- Noise canceller
- Multiplex
- AM up-conversion
- FM/AM switch
- MRC

### Features

- Improved noise reduction methods
  - The FM front end provides excellent 3-signal characteristics equivalent to those of the LA1193M.

- Superlative listenability due to improved medium and weak field noise canceller characteristics.
- Improved separation characteristics
- Anti-birdie filter
- Improved AM and FM thermal characteristics
- Excellent FM signal meter linearity
- Modified N.C. circuit for improved noise rejection
- Double conversion AM tuner (up conversion)
  - Reduces the number of external components required as compared to earlier double conversion tuners, in particular, no crystal is required (when used in conjunction with the LC72144).
- Sample-to-sample variation reduction circuit built into the FM IF circuit.
  - (Fixed resistors are used for the SD, keyed AGC, mute on adjustment, ATT, SNC, and HCC functions.)
- Since the LA1780M retains the block structure of the LA1888NM, products using that IC can be easily converted, allowing further end product miniaturization.

### Package Dimensions

Unit:mm

#### 3159-QFP64E

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

## Specifications

### Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V <sub>CC1</sub> max	Pins 6, 40, and 61	9	V
	V <sub>CC2</sub> max	Pins 7, 45, 54, 59, and 60	12	V
Allowable power dissipation	Pd max	Ta ≤ 55°C	950	mW
Operating temperature	T <sub>opr</sub>		-40 to +85	°C
Storage temperature	T <sub>stg</sub>		-40 to +150	°C

### Operating Conditions at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V <sub>CC</sub>	Pins 6, 7, 40, 45, 54, 59, 60, and 61	8	V
	V <sub>CCST</sub> IND	Pin 26	5	V
Operating supply voltage range	V <sub>CC</sub> op		7.5 to 9.0	V

### Operating Characteristics at Ta = 25°C, V<sub>CC</sub> = 8.0V, in the specified test circuit for the FM IF input

Parameter	Symbol	Conditions	Ratings			unit
			min	typ	max	
[FM Characteristics] At the FM IF input						
Current drain	I <sub>CCO-FM</sub>	No input, I40 + I45 + I54 + I59 + I60 + I61	60	94	110	mA
Demodulation output	V <sub>O-FM</sub>	10.7 MHz, 100dBμ, 1 kHz, 100%mod, The pin 15 output	205	310	415	mVrms
Pin 31 demodulation output	V <sub>O-FM31</sub>	10.7 MHz, 100dBμ, 1 kHz, 100%mod, The pin 31 output	190	295	380	mVrms
Channel balance	CB	The ratio between pins 15 and 16 at 10.7 MHz, 100 dBμ, 1 kHz	-1	0	+1	dB
Total harmonic distortion	THD-FM mono	10.7 MHz, 100 dBμ, 1 kHz, 100% mod, pin 15		0.3	1	%
Signal-to-noise ratio: IF	S/N-FM IF	10.7 MHz, 100 dBμ, 1 kHz, 100% mod, pin 15	75	82		dB
AM suppression ratio: IF	AMR IF	10.7 MHz, 100 dBμ, 1 kHz, f <sub>m</sub> = 1 kHz, 30% AM, pin 15	55	68		dB
Muting attenuation	Att-1	10.7 MHz, 100 dBμ, 1 kHz. The pin 15 attenuation when V33 goes from 0 to 2 V	5	10	15	dB
	Att-2	10.7 MHz, 100 dBμ, 1 kHz. The pin 15 attenuation when V33 goes from 0 to 2 V*1	15	20	25	dB
	Att-3	10.7 MHz, 100 dBμ, 1 kHz. The pin 15 attenuation when V33 goes from 0 to 2 V*2	28	33	38	dB
Separation	Separation	10.7 MHz, 100 dBμ, L+R = 90%, pilot = 10%. The pin 15 output ratio	30	40		dB
Stereo on level	ST-ON	The pilot modulation such that V26 < 0.5 V	1.2	2.4	4.4	%
Stereo off level	ST-OFF	The pilot modulation such that V26 > 3.5 V	0.6	1.6		%
Main total harmonic distortion	THD-Main L	10.7 MHz, 100 dBμ, L+R = 90%, pilot = 10%. The pin 15 signal		0.3	1.2	%
Pilot cancellation	PCAN	10.7 MHz, 100 dBμ, pilot = 10%. The pin 15 signal/the pilot level leakage. DIN audio	20	30		dB
SNC output attenuation	AttSNC	10.7 MHz, 100 dBμ, L-R = 90%, pilot = 10%. V28 = 3 V → 0.6 V, pin 15	1	5	9	dB
HCC output attenuation	AttHCC-1	10.7 MHz, 100 dBμ, 10 kHz, L+R = 90%, pilot = 10%. V29 = 3 V → 0.6 V, pin 15	0.5	4.5	8.5	dB
	AttHCC-2	10.7 MHz, 100 dBμ, 10 kHz, L+R = 90%, pilot = 10%. V29 = 3 V → 0.1 V, pin 15	6	10	14	dB
Input limiting voltage	V <sub>i-lim</sub>	100 dBμ, 10.7 MHz, 30% modulation. The IF input such that the input reference output goes down by 3 dB	33	40	47	dBμ
Muting sensitivity	V <sub>i-mute</sub>	The IF input level (unmodulated) when V33 = 2 V	27	35	43	dBμ
SD sensitivity	SD-sen1 FM	The IF input level (unmodulated) (over 100 mV rms) such that the IF counter buffer output goes on	54	62	70	dBμ
	SD-sen2 FM		54	62	70	dBμ
IF counter buffer output	V <sub>IFBUFF-FM</sub>	10.7 MHz, 100 dBμ, unmodulated. The pin 23 output	220	330	440	mVrms
Signal meter output	V <sub>SM</sub> FM-1	No input. The pin 24 DC output, unmodulated	0.0	0.1	0.3	V
	V <sub>SM</sub> FM-2	50 dBμ. The pin 24 DC output, unmodulated	0.4	1.0	1.5	V
	V <sub>SM</sub> FM-3	70 dBμ. The pin 24 DC output, unmodulated	2.0	2.7	3.5	V
	V <sub>SM</sub> FM-4	100 dBμ. The pin 24 DC output, unmodulated	4.7	5.5	6.2	V
Muting bandwidth	BW-mute	100 dBμ. The bandwidth when V33 = 2 V, unmodulated	100	150	200	kHz
Mute drive output	V <sub>MUTE-100</sub>	100 dBμ, 0 dBμ. The pin 33 DC output, unmodulated	0.00	0.03	0.20	V

## LA1780M

Continued from preceding page.

Parameter	Symbol	Conditions	Ratings			unit
			min	typ	max	
[FM FE Mixer Input]						
N-AGC on input	V <sub>N-AGC</sub>	83 MHz, unmodulated. The input such that the pin 2 voltage is 2.0 V or below	80	87	94	dB $\mu$
W-AGC on input	V <sub>WAGC</sub>	83 MHz, unmodulated. The input such that the pin 2 voltage is 2.0 V or below. (When the keyed AGC is set to 4.0 V.)	100	106	112	dB $\mu$
Conversion gain	A.V	83 MHz, 80 dB $\mu$ , unmodulated. The FE CF output	19	30	48	mVrms
Oscillator buffer output	V <sub>OSCBUFFFM</sub>	No input	260	370	480	mVrms
[NC Block] NC input (pin 30)						
Gate time	$\tau$ GATE1	f = 1 kHz, for a 1- $\mu$ s, 100-mV p-o pulse		55		$\mu$ s
Noise sensitivity	SN	The level of a 1 = kHz, 1- $\mu$ s pulse input that starts noise canceller operation. Measured at pin 30.		40		mVp-o
NC effect	SN-NC	The pulse rejection effect provided by the noise canceller. For a repeated 1- $\mu$ s wide pulse, frequency = 10 kHz, 150 mV p-o. The ratio of the FM mode pin 15 output referenced to the AM mode pin 15 output (effective value)	5			
[Multipath Rejection Circuit] MRC input (pin 27)						
MRC output	VMRC	V <sub>24</sub> = 5 V	2.2	2.3	2.4	V
MRC operating level	MRC-ON	The pin 32 input level at f = 70 kHz such that pin 24 goes to 5 V and pin 27 goes to 2 V	10	15	20	mVrms
[AM Characteristics] AM ANT input						
Practical sensitivity	S/N-30	1 MHz, 30 dB $\mu$ , f <sub>m</sub> = 1 kHz, 30% modulation, pin 15	20			dB
Detector output	V <sub>O-AM</sub>	1 MHz, 74 dB $\mu$ , f <sub>m</sub> = 1 kHz, 30% modulation, pin 15	85	120	170	mVrms
Pin 31 detector output	V <sub>O-AM31</sub>	1 MHz, 74 dB $\mu$ , f <sub>m</sub> = 1 kHz, 30% modulation, pin 31	75	110	150	mVrms
AGC F.O.M.	V <sub>AGC-FOM</sub>	1 MHz, 74 dB $\mu$ , referenced to the output, the input amplitude such that the output falls by 10 dB. Pin 15	56	61	66	dB
Signal-to-noise ratio	S/N-AM	1 MHz, 74 dB $\mu$ , f <sub>m</sub> = 1 kHz, 30% modulation	47	52		dB
Total harmonic distortion	THD-AM	1 MHz, 74 dB $\mu$ , f <sub>m</sub> = 1 kHz, 80% modulation		0.3	1	%
Signal meter output	V <sub>SM AM-1</sub>	No input	0.0	0.2	0.5	V
	V <sub>SM AM-2</sub>	1 MHz, 130 dB $\mu$ , unmodulated	3.8	4.8	6.2	V
Oscillator buffer output	V <sub>OSCBUFF AM1</sub>	No input, the pin 5 output	185	230		mVrms
Wide band AGC sensitivity	W-AGCsen1	1.4 MHz, the input when V <sub>46</sub> = 0.7 V	83	89	95	dB $\mu$
	W-AGCsen2	1.4 MHz, the input when V <sub>46</sub> = 0.7 V (seek mode)	74	80	86	dB $\mu$
SD sensitivity	SD-sen1 AM	1 MHz, the ANT input level such that the IF counter output turns on.	26	32	38	dB $\mu$
	SD-sen2 AM	1 MHz, the ANT input level such that the SD pin goes to the on state.	26	32	38	dB $\mu$
IF buffer output	V <sub>IFBUFF-AM</sub>	1 MHz, 74 dB $\mu$ , unmodulated. The pin 23 output	200	290		mVrms

Note: These measurements must be made using the either the IC-51-0644-824 or KS8277 IC socket (manufactured by Yamaichi Electronics).

\* 1. When the resistor between pin 58 and ground is 200 k $\Omega$ .

\* 2. When the resistor between pin 58 and ground is 30 k $\Omega$ .

**Function List**

## FM Front End (Equivalent to the Sanyo LA1193)

- Double input type double balanced mixer
- Pin diode drive AGC output
- MOSFET second gate drive AGC output
- Keyed AGC adjustment pin
- Differential IF amplifier
- Wide band AGC sensitivity setting pin, and narrow band AGC sensitivity setting pin
- Local oscillator

## FM IF

- IF limiter amplifier
- S-meter output (also used for AM) 6-stage pickup
- Multipath detection pin (shared FM signal meter)
- Quadrature detection
- AF preamplifier
- AGC output
- Band muting
- Weak input muting
- Soft muting adjustment pin
- Muting attenuation adjustment pin
- IF counter buffer output (also used for AM)
- SD (IF counter buffer on level) adjustment pin
- SD output (active high) (also used for AM)

## Noise Canceller

- High-pass filter (first order)
- Delay circuit based low-pass filter (fourth order)
- Noise AGC
- Pilot signal compensation circuit
- Noise sensitivity setting pin
- Function for disabling the noise canceller in AM mode

## Multiplex Functions

- Adjustment-free VCO circuit
- Level follower type pilot canceller circuit
- HCC (high cut control)
- Automatic stereo/mono switching
- VCO oscillation stop function (AM mode)
- Forced monaural
- SNC (stereo noise controller)
- Stereo display pin
- Anti-birdie filter

## AM

- Double balanced mixer (1st, 2nd)
- IF amplifier
- Detection
- RF AGC (narrow/wide)
- Pin diode drive pin
- IF AGC
- Signal meter output (also used for FM)
- Local oscillator circuits (first and second)
- Local oscillator buffer output
- IF counter buffer output (also used by the FM IF)
- SD (IF counter buffer on level) adjustment pin
- SD output (active high) (also used for AM)
- Wide AGC
- Detection output frequency characteristics adjustment pin (low cut, high deemphasis)
- AM stereo buffer

## MRC (multipath noise rejection circuit)

AM/FM switching output (linked to the FM  $V_{CC}$ )

Pin Descriptions

Pin No.	Function	Description	Equivalent circuit
1	Antenna damping drive	An antenna damping current flows when the RF AGC voltage (pin 2) reaches $V_{CC}-V_D$ .	<p style="text-align: right;">A08578</p>
2	RF AGC	Used to control the FET second gate.	<p style="text-align: right;">A08579</p>
3	F.E.GND		
4	OSC	Oscillator connection The transistor and capacitors required for the oscillator circuit are integrated on the chip.	<p style="text-align: right;">A08580</p>
7	AM OSC	AM first oscillator This circuit can oscillator up to the SW band. An ALC circuit is included.	<p style="text-align: right;">A08581</p>

**Usage Notes**

1. Notes on  $V_{CC}$  and Ground

Pin 40	$V_{CC}$ for the FM IF, AM, NC, MPX, and MRC blocks
Pin 25	Ground for the FM IF and AM blocks
Pin 14	Ground for the NC, MPX, and MRC blocks
Pin 61	$V_{CC}$ for the FM front end, AM first mixer, and first oscillator blocks
* Pin 6	$V_{CC}$ for the FM front end and AGC blocks, and the AM/FM switching pin
Pin 3	Ground for the FM front end, first mixer, and first oscillator blocks

2. Notes on AM Coil Connection

The  $V_{CC}$  used for the first oscillator coil connected to pin 7 must be at the same potential as pin 61. Connect to the IFT connected with pin 45, and to the MIX coil connected with pin 54.  $V_{CC}$  must be at the same potential as pin 40.

3. AM/FM Switching

Pin 6 is also used as the FM front end and RF AGC  $V_{CC}$

A08620

Pin 6 voltage	Mode
8	FM
OPEN	AM

4. Relationship between Pin 23 and Pin 26

• FM mode

Pin 26 functions as both the stereo indicator and the SD pin.

Pin 23: DC-input seek/stop pin (control pin)

AC output IF counter buffer pin

A08621

A08622

**The Pin 23 Control Function and the Relationship between Pin 23 and Pin 26**

SW1	SW2	Pin 23 voltage	Pin 26	Pin 26
OPEN	OPEN	5 V	IF counter buffer on	SD
ON	OPEN	2.5 V	OFF	High-speed SD
—	ON	Under 0.7 V	OFF	Stereo indicator

# LA1780M

A08623

## Notes on FM SD

A08624

## LA1780M

- AM mode

A08625

### Pin 55: AM SD Adjustment Pin

- Pins that support AM stereo

A08626

- To attenuate the pin 39 AC level:  
Add a capacitor between pin 39 and ground.  
For example, if a capacitor is added between pin 39 and ground, and pin 51 is attached, the AM IF output will be reduced by about 6 dB.

# LA1780M

- Notes on the muting attenuation

The resistor between pin 58 and ground switches the muting attenuation to one of three levels, -20, -30, and -40 dB. This is also related to the tuner's total gain.

A08627

R	Mute ATT
OPEN	-20 dB
200k	-30 dB
30k	-40 dB

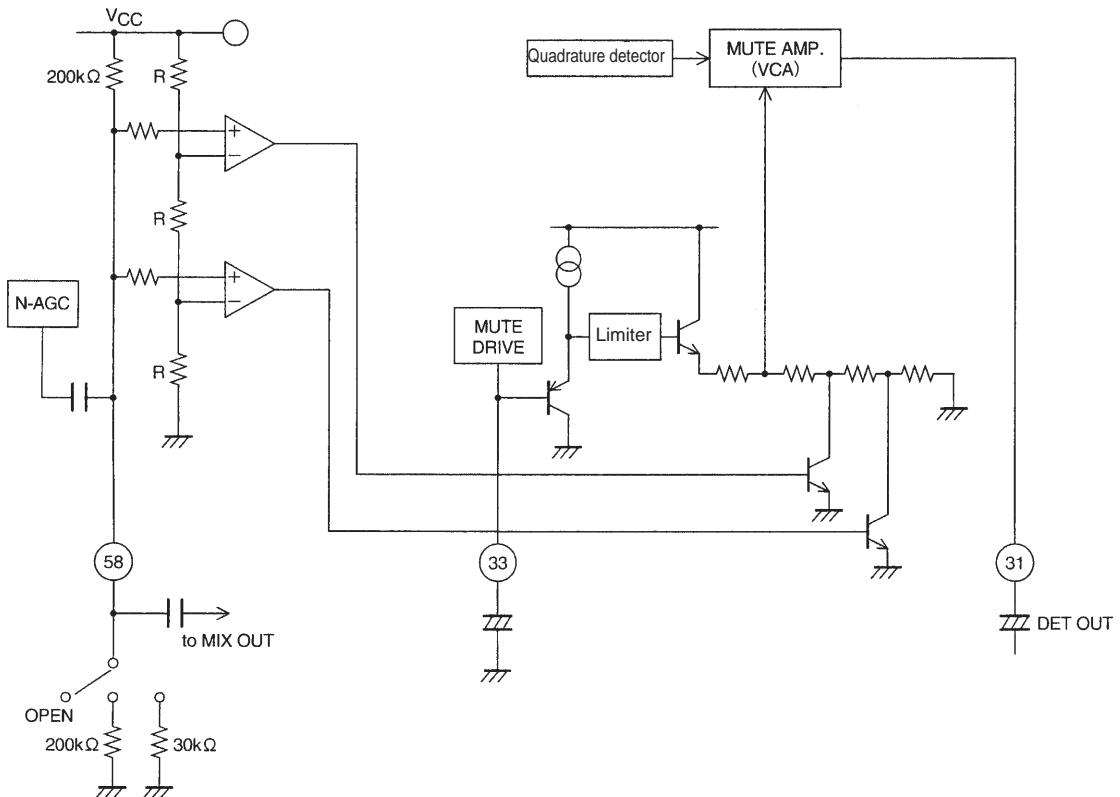

A08628

If R33 is reduced, the attenuation will be reduced as listed in the table above.

A08629

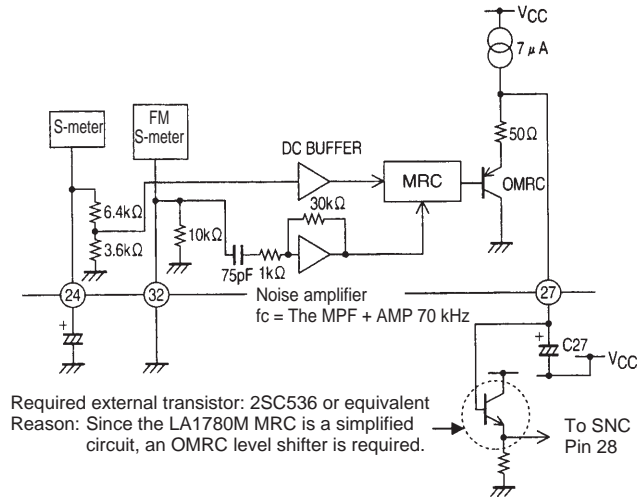

Muting time constants  
 Attack:  $10\text{ k} \times C33$   
 Release:  $50\text{ k} \times C33$

A08630

## LA1780M

• MRC circuit

A08631

- If there is no AC noise on pin 32:

$$V_{24} = V_{27} - V_{BE}$$

↑  
Q<sub>MRC</sub>

V<sub>27</sub> will be about 2.5 V for an antenna input of 60 dBμ or higher.

- Since the MRC noise amplifier gain is fixed, the MRC circuit is adjusted by reducing the AC input level.

A08632

- The MRC circuit attack and release times are determined by the capacitor C27 on pin 27.

Attack:  $7 \mu\text{A} \times C_{27}$   
 Release:  $500 \Omega \times C_{27}$

### 5. FM Soft Muting

A08633

By comparing the pin 47 mute on adjustment voltage to the S-meter voltage (V<sub>24</sub>), the muting on point can be adjusted.

• Noise canceller notes

The characteristics of the noise canceller have been improved by implementing the circuit that determines the gate time in logic. In earlier noise canceller circuits, since the time constant was determined with an RC circuit such as the one shown in figure 5, the rise time was influenced by the RC circuit time constant as show in figure 6. This meant that the rise was delayed and the associated switching delay resulted in a reduction of the circuit's ability to exclude noise.

Figure 5

In the LA1780M, the rise time is made shorter by implementing the circuit that determines the gate time in logic. This allows the LA1780M to eliminate noise reliably.

Figure 6

• Gain distribution (FM)

This section analyzes the gain in each of the blocks in the LA1780M when the Sanyo recommended circuit is used.

Test conditions

- Ambient temperature: 26°C
- Antenna and mixer input frequency: 98.1 MHz
- First and second IF input frequency: 10.7 MHz

Input levels when VSM = 2 V were measured to be:

- Antenna input: 19 dBμ
- Mixer input: 30 dBμ
- First IF input: 42 dBμ
- Second IF input: 60 dBμ

These values allow the gains in each block to be calculated as follows.

- RF gain: 11 dB
- Mixer gain: 12 dB

A08636

AM

This section analyzes the gain in each of the blocks in the LA1780 when the Sanyo recommended circuit is used.

Test conditions

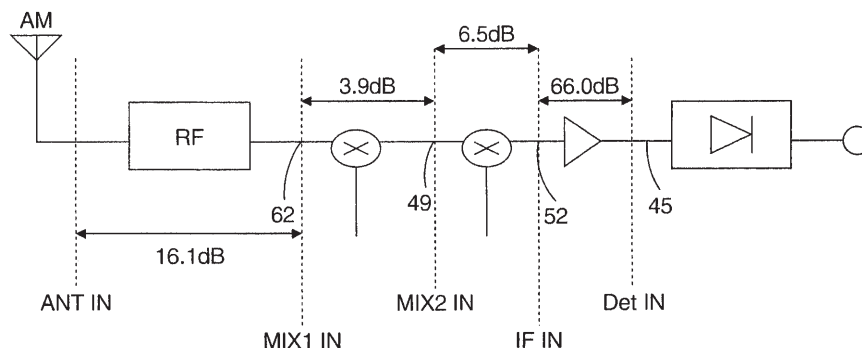

- Ambient temperature: 26°C
- Antenna and mixer 1 input frequency: 1 MHz
- Mixer 2 input frequency: 10.71 MHz
- IF and detector input frequencies: 450 kHz
- An AM dummy is attached.

When an input level such that the output becomes -35 dBm is determined, the I/O characteristics of each stage were determined to be as follows:

- Antenna input: 9.5 dBμ
- Mixer 1 input: 25.6 dBμ
- Mixer 2 input: 29.5 dBμ
- IF input: 36.0 dBμ
- Detector input: 102.0 dBμ

These values allow the gains in each block to be calculated as follows.

- RF gain: 16.1 dB
- Mixer 1 gain: 3.9 dB
- Mixer 2 gain: 6.5 dB
- IF gain: 66.0 dB

## LA1780M

- 3D AGC (keyed AGC) settings

- The antenna damping function operates by providing the pin diode antenna damping current from the pin when the pin 2 voltage becomes equal to  $V_{CC} - V_{BE}$ .
- The noise AGC circuit operates as follows:  
When the pin 39 voltage is greater than  $(6.4/3.6)$  times the pin 24 voltage, the AGC circuit is off.  
When the pin 39 voltage is less than  $(6.4/3.6)$  times the pin 24 voltage, the AGC circuit is on.

AM AGC System

A08646

The LA1780M RF AGC is picked up from three locations.

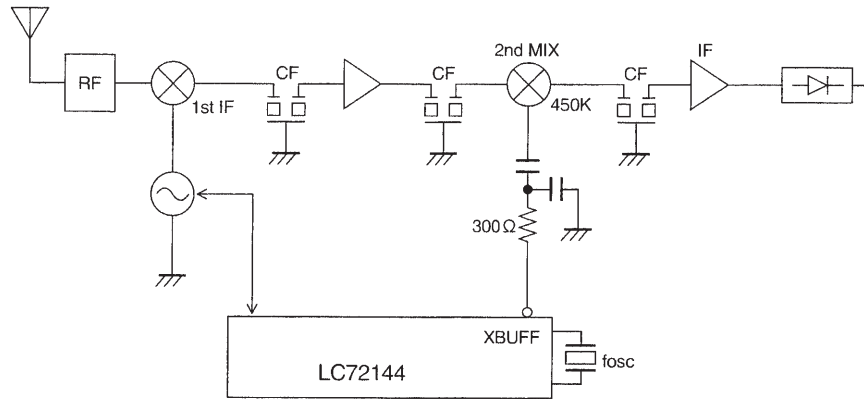

- The wide AGC determined by  $R_w$
- The middle AGC picked up from the pin 49 second mixer input  
The operating bandwidth is 150 kHz to 180 kHz (the bandwidth of the 10.7 MHz CF)
- The narrow AGC picked up from pin 52  
The operating bandwidth is 7 kHz (the bandwidth of the 450 kHz CF)

AM AGC Frequency Characteristics

# LA1780M

- Sample AM application using the LC72144 and the LA1780M

A08647

		AM 1st IF	Step	FM IF
1	$f_{osc}$ 10.25 MHz	10.7 MHz	10 K, 1 K	10.7 MHz
2	$f_{osc}$ 10.35 MHz	10.8 MHz	9 K, 10 K	10.8 MHz
